

GAME CHANGED.

A NEW, PATENT-PENDING FORMULATION THAT ENABLES WHAT WAS, UNTIL NOW, NOT POSSIBLE:
A TRULY RELIABLE MEMBRANE INTEGRITY TEST FOR CONVENTIONAL ROOF ASSEMBLIES.

Stop Playing Games with Inconclusive Membrane Integrity Tests on Conventional Roof Assemblies.

Introducing New TruGround™ Conductive Primer by Detec

It's the only way to specify a conductive layer DIRECTLY UNDER the membrane that doesn't compromise adhesion. Ensuring a quick, thorough, and incredibly accurate membrane integrity test is performed. And only Detec has it.

US, Canadian & European Patents Pending

TruGround by Detec is the better way to ensure that the waterproof membrane on your conventional roof assembly is dry and watertight. For use with Detec's IntegriScan™ Testing Method, TruGround has changed the game with a simple and cost-effective solution that brings true integrity to your membrane by creating the closest, most thorough coverage of the entire membrane.

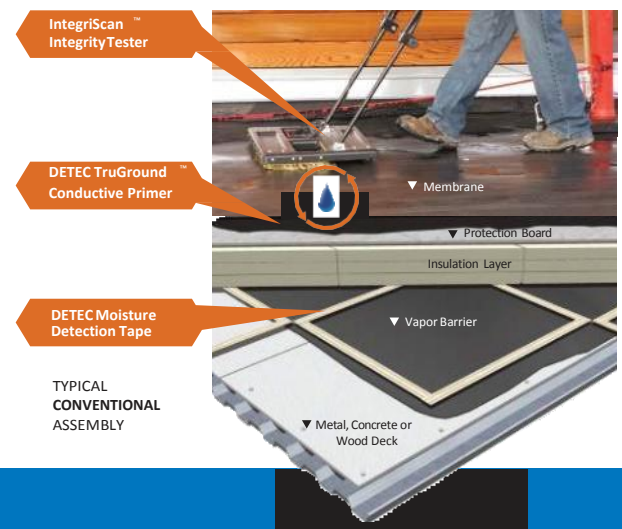

FEATURES

- Chemically and mechanically compatible with fully-adhered, mechanically-attached and torch-down membrane systems
- 30-minute dry time under normal conditions
- Retesting can be performed for the life of the membrane, should a breach occur at a later date
- Non-reflective, flat black to ensure complete coverage
- Water-based (non-flammable & solvent-free)
- Low VOC, meets Southern California's strict emissions control requirements for primers
- Roll, spray, or pre-apply to protection boards

Because Closer Is Better.

HOW IT WORKS:

TruGround creates the closest conductive layer possible: directly under the membrane. Before close-in, a light spraying of water is applied to the top of the membrane. TruGround is then charged with a low voltage current. When IntegriScan travels over a breach, a circuit is completed due to the moisture transferring through the membrane, alerting us to the breach with the strongest, most reliable signal possible, unlike inconclusive methods such as flood tests, ski poles, or wire mesh (particularly if placed under the cover board). No guessing, no gimmicks. Just quick, reliable test results.
